AGREEMENT ON THE CONSERVATION OF AFRICAN-EURASIAN MIGRATORY WATERBIRDS

7th SESSION OF THE MEETING OF THE PARTIES
4 - 8 December 2018, Durban, South Africa

“Beyond 2020: Shaping flyway conservation for the future”

DRAFT RESOLUTION 7.7

STRENGTHENING MONITORING OF MIGRATORY WATERBIRDS

Recalling Resolution 6.3 “Strengthening monitoring of migratory waterbirds”, and further recalling Resolution 5.2 “Addressing gaps in knowledge of and conservation action for waterbird populations and sites important for them” and Resolution 5.22 “Establishing a long-term basic structural funding regime for the International Waterbird Census in the African-Eurasian region”,

Taking note of the Report on the Development of Waterbird Monitoring along the African-Eurasian Flyways and the progress made towards achieving Targets 3.1. of the AEWA Strategic Plan 2009-2017 with respect to waterbird monitoring data gathering and being aware that sustainable funding is yet to be secured (document AEWA/MOP 7.31),

Gratefully acknowledging the contributions to the objectives of AEWA with respect to developing waterbird monitoring, made by Contracting Parties, international donors, national and international non-governmental organisations, particularly through the AEWA African Initiative, the Wadden Sea Flyway Initiative, the Conserving Migratory Waterbirds in West Africa project, the Mediterranean Waterbird Monitoring project, the Strengthening Waterbird Monitoring in the African-Eurasian Flyway project, the Adriatic Flyway Initiative, the Migratory Soaring Birds project, and the RESSOURCE project as examples of strategic regional initiatives for the conservation of waterbirds and their habitats,

Noting that the preliminary “Report on the Site Network for Waterbirds in the Agreement Area - 1st edition” (document AEWA/MOP 5.15) was not revised and finalised during the last two triennia due to lack of funding,

Welcoming the revised AEWA Conservation Guidelines on Waterbird Monitoring (document AEWA/MOP 7.35) adopted through [Draft Resolution 7.8],

Welcoming the progress with the coordination and reporting from the International Waterbird Census (document AEWA/MOP 7.14) and recognizing the need for continued support for the scheme both at national and international level,

Being aware that further improvement of the knowledge of population sizes, with regard to quantity and quality, is primarily limited by the lack of adequate national and international monitoring schemes focusing on breeding birds in Africa and Central & South-west Asia,
Acknowledging the major contributions of the EU Birds Directive Article 12 reporting process and the European Red List of Birds to the last two editions of the AEWA Conservation Status Report,

Welcoming the progress with the 2nd European Breeding Bird Atlas coordinated by the European Bird Census Council and appreciating the improvements in population size estimates and range change estimates this may bring,

Acknowledging shared interest in water- and seabird populations covered by status assessment under OSPAR, HELCOM and CAFF,

Further acknowledging the contribution of the 2nd Southern African Bird Atlas project to the status assessment of several AEWA populations,

Acknowledging that in CSR7, the increase of populations whose status is assessed on the basis of regular monitoring data has increased from 102 to 221, i.e. by 116% compared to CSR4, and thus exceeds the Strategic Plan target of 50%, but still represents only 40% of the populations listed in Table 1 of the AEWA Action Plan,

Extremely concerned that only one of the eight status-related targets of the Strategic Plan have been reached so far and, in the case of six of the eight targets, the situation has worsened (document AEWA/MOP 7.10),

Acknowledging the usefulness of the Critical Site Network Tool for a number of international and national processes under the Agreement and grateful for its technical redevelopment under the Climate Resilient Flyway project, recognizing its potential to facilitate the monitoring of Objective 3 of the AEWA Strategic Plan 2018-2027, while recognising that adequate monitoring schemes are essential to ensure that the Tool contains information that is adequate to support the management of the site network,

Recognising that other MEAs, particularly the Ramsar Convention on Wetlands and the Convention on Migratory Species, as well as the EU Birds Directive, require regular waterbird monitoring data for their operations, such as Ramsar criteria 5 and 6 for the designation of wetlands of international importance whose applicability is linked to the Waterbird Population Estimates,

Taking into account the conclusions and recommendations of the Standing Committee report to MOP7 on the Progress of implementation of the AEWA Strategic Plan 2009-2017 (document AEWA/MOP 6.12),

Further taking into account the relevant targets and activities of the AEWA Strategic Plan 2019-2027 and of the Plan of Action for Africa 2019-2027,

Being aware that the UNEP/AEWA Secretariat is represented in the African-Eurasian Waterbird Monitoring Partnership1, Welcoming the establishment of the Waterbird Fund2 and thanking the Government of Switzerland and other contributors for their donations to the Fund so far,

The Meeting of the Parties:

1. Welcomes the progress made by the Waterbird Monitoring Partnership and encourages the Partnership to continue its work;

2. Strongly urges Parties and other donors to regularly contribute to the Waterbird Fund;

3. Reiterates operative paragraphs 4 - 9 of Resolution 6.3;

4. Urges Range States to develop adequate national monitoring schemes following the principles presented in the revised AEWA Conservation Guidelines on waterbird monitoring and its annexes including the recommended seasons and monitoring methods both for breeding and non-breeding waterbirds resulting in the identification and monitoring of international and national important sites and contributing to the production of flyway-level population size and trend estimates for populations listed on Table 1 of the AEWA Action Plan and understanding the causes of population changes;

5. Welcomes the launch of the African Bird Atlas initiative and urges Parties and other organisations to join and support the initiative;

6. Invites the relevant organisations to upgrade the international coordination of the monitoring of the relevant AEWA populations during the breeding season, with particular attention to colonial breeding species and to engage with the Waterbird Monitoring Partnership;

7. Urges Contracting Parties and organisations to provide financial support for the identification of priorities for the systematic development of waterbird monitoring and for the population and site monitoring related activities identified in the AEWA Strategic Plan 2019-2027 and of the Plan of Action for Africa 2019-2027;

8. Invites the Technical Committee and the Secretariat to review the national reporting format, in consultation with the Waterbird Monitoring Partnership;

9. Welcomes the update of the 1% thresholds for waterbird populations listed on Table 1 of the AEWA Action Plan (available on the Waterbird Population Estimates web portal3 and in Annex 1 of the 7th edition of the AEWA Conservation Status Report) and encourages Parties to use these thresholds when identifying internationally important sites;

10. Invites the Technical Committee and the Secretariat to work with the Ramsar Convention and its regional initiatives, the European Commission as well as the secretariats of CAFF, OSPAR, HELCOM and other relevant regional MEAs to identify possible synergies with respect to waterbird population estimates and to waterbird monitoring and reporting.
