Sing, Fly, Soar like a Bird!

This year’s World Migratory Bird Day (May 8) focuses on the phenomena of “bird song” and “bird flight” as a way to inspire and connect people to celebrate migratory birds and to unite in a common global effort to protect birds and the habitats they need to survive. Billions of migratory birds sing and, for many people, their songs have been a source of comfort and joy during the pandemic. Let’s try to honour all of them by participating in online activities, sharing digital content, or reconnecting with nature by actively listening to, and watching birds.
